

In-Wall Media Panel

The MP-8 In-Wall Media Panel adds flexibility and ease of installation to any media system job. Requiring only an 8" x 11-3/4" opening, the MP-8 mounts with just 4 screws using our 6-1/2" speaker frame and steel clamp ring (all included).

The MP-8 holds up to 8 Decora plates of any configuration. The inserts cover the screws for a clean appearance and the MP-8 accepts labels from any 9 mm label system for proper identification of function and comes with 378 pre-printed labels to choose from.

The MP-8 is solidly constructed from 5 mm-thick powder-coated-white aluminum.

To prep for installation after sheetrock, use our RIB-62 Rough-In bracket, populate the MP-8 back in your shop where it is more convenient to work, and then just install the MP-8 on-site after the sheetrock is done.

The MP-8 is access-friendly. With just 4 screws, the MP-8 is in or out, while typical 8-gang plates have 16 screws to remove the plate plus two screws per decora plate. The MP-8 saves time and money on the job and is a snap for installers to work with.

The **Limited Lifetime Warranty** is your customer's assurance that the gear you're installing will withstand the test of time.
